

# Bi'Soluk Website Project

---

## Why This Project Is Chosen

I'm taking part in a student club, Social Responsibility Club. When we organized some activities, we want to share it with people for introducing our club. When we shared media files, some information by social media websites such as Twitter, Instagram or Facebook, we don't have a chance to reorganize them, having a chance for designing layout and showing old posts on front page. To solve these problems, I wanted to create a website for club. However, club is not related with information technologies, so it is possible that no one understands the managing the website. To solve it, I wanted to add an admin panel and make it possible to change some contents on this panel. So even no one understands how to manage a website, they can change content, announcements, news parts.

## What Already Exist On Web

- Web page has a slider which is created by an online tool.
- For authentication, an already written source is used.
